NEW FOR 2027 · FROM THE TEAM BEHIND THE CRBE SUMMITS

THE NEXT GENERATION OF DRUG FORMULATION, MANUFACTURING & DELIVERY IS HERE...

Are you a pioneer in the drug product development community? Would your team like to educate and engage new customers, extend brand awareness or strengthen existing relationships?

Designed by industry, for industry, the 2027 CRBE Summit East Coast Fall is a fun, highly interactive and engaging forum for senior drug product development, formulation and CMC leaders, coming to Princeton, NJ this November. Its focus is advanced formulation and drug delivery: making poorly soluble and "beyond Rule of 5" molecules bioavailable, engineering controlled and long-acting release, delivering biologics, peptides and nucleic acids by new routes and devices, and scaling formulations reliably to commercial manufacture.

A big driver for our drug product development attendees is to connect with external CDMOs, as well as specialty software, technology and instrumentation companies servicing their development and manufacturing needs.

> **Are you ready to do more for your sales pipeline in 2 fun days of networking than the whole rest of the year?**

PARTNERING WITH THE 2027 SUMMIT WILL HELP YOU

- **Enhance commercial relationships** with existing clients through platform interaction, meetings and discussing the latest opportunities
- **Raise your brand awareness** to a captive, engaged audience of decision-makers
- **Elevate your profile** amongst industry peers and build a contact base through 1-2-1 networking sessions
- **Generate direct new business** from senior-level attendees currently sourcing drug product development solutions

KEY TOPICS · 4 STREAMS

ADVANCED FORMULATION & DRUG DELIVERY

Technical talks, case studies, panels and discussion on the formulation science and delivery technologies that turn hard molecules into working medicines, from first prototype to commercial scale.

SMALL MOLECULES 01

- Predictive bioperformance: data analytics, PBPK & IVIVC modeling
- Prodrug design for absorption and targeting
- Solubility & bioavailability enhancement (amorphous solid dispersions, spray drying, hot-melt extrusion)
- Particle engineering & nanosizing
- Lipid-based & self-emulsifying oral formulations
- Long-acting injectables, microspheres & implants
- Modified, delayed & colon-targeted release; pediatric & geriatric formulations
- Continuous manufacturing & 3D-printed dosage forms
- Highly potent & oncology drug formulation
- Beyond Rule of 5: oral delivery of degraders, macrocycles & peptides

BIOLOGICS 02

- Lipid nanoparticles for oligonucleotides, siRNA & mRNA
- High-concentration antibody formulations for subcutaneous delivery
- Oral, inhaled & nasal delivery of biologics
- Cell & gene therapy and AAV delivery
- Biologics stability & lyophilization
- Long-acting ocular delivery
- Targeted vascular delivery

DEVICES & COMBINATION PRODUCTS

03

- Combination products for biologic delivery
- High-volume wearable on-body injectors

TECHNOLOGY & INNOVATION

04

- AI-driven formulation design & post-market safety for combination products
